MicroHub LE MODEL MIL•4000H 9 Port 10BaseT Workgroup Hub

Conforms to IEEE 802.3 Repeater Unit Specifications

- All ports are separately partitioned in response to excessive collision or fault conditions.
- All ports automatically reconnect once fault condition is cured.
- Transmit and receive mode, collision detection, and propagation are implemented.
- Full amplitude and retiming regeneration for re-transmitted waveforms removes jitter caused by cable attenuation and other devices on the network.
- Deep fifo eliminates any preamble loss.
- Jabber lock up protection-Repeater logic disables transmission for 96 bit times once jabber packet of 65,536 bits is received.
- Automatic polarity reversal is disabled by default.
- Link test is enabled by default.
